June, 2016

# Agenda

Background

Implementation process

Challenges

Workflow

Lessons learned

Conclusions

# Background

- Accessibility is the human right of the digital era: Monica Duhem.
- The Federal Law of Telecommunications and Broadcasting (June, 2014):
  - Acknowledges audiences' right to accessible information.
  - Establishes that the websites from every government organization must be accessible.
- In August, 2014, the new IFT website starts to be built.
  - AA level declaration from the W3C, i.e., information from the website can be reached by people with visual disabilities.
  - Audience-based data architecture.
  - Documents are published by the units that created them.
  - IT architecture with new security and high availability features.
- The website was launched on April 16, 2015.

# Implementation process

- Component architecture and technological platform definition.
- Website's visual design with both responsive and accessible features.
- Definition of the Publishing procedure for the website content.
- Appointing and training of web publishers.
  - About web accessibility in contents and documents.
  - About managing the content platform of the website.
- Migration of the information from the previous website.
  - A date from which all contents to be published had to be accessible was set.
  - Any information predating that threshold is accessible only in an on-demand basis.
- An information campaign, highlighting the website features, was launched both in-house and outside the IFT.

# Challenges

- Widespread ignorance about accessibility for websites.
- To change paradigms and prejudices (for instance, “accessible websites are unappealing”).
- Three ways to address this topic:
  - Technical: provide the initial structure and design.
  - Content generation: keep and produce new documents with accessibility features.
  - Organizational:
    - Definition of roles
    - Competence building
    - Issuing guidelines in order to formalize the process and specify each actor’s role

# Challenges

- Maintain the organization's commitment to keep the website's accessibility features.
- Periodical monitoring of the accessibility features, both in published documents and design of the website.
- Training ... training... training...

# WORKFLOW

Chairman

Issues the Accessibility Guidelines

- Rule the way units publish documents in the website
- Set the standards of accessible content production

# IT Unit

Web Publishers

# III

Reviewing Units

Support and consulting

Publishes

Web Publishers  
Produces accessible documents

Author

Creates content

IT Unit  
Supports web publishers with accessible documents

Periodical monitoring on accessibility

Accessibility consultant

# Lessons Learned

- Commitment, empowerment and enforcement are needed in a top-down basis.
  - Issuing of accessibility guidelines.
  - Establishing formal communication lines with the heads of every unit.
  - Periodical monitoring and reporting to both the high-level direction and the content producers.
- Competence building.
  - Training the code-writers and designers is important.
  - Training publishers in producing accessible content is even more important!
- Not only is the transmission of knowledge important; to raise awareness of accessibility is also relevant.

# Conclusions

- IFT's website is a responsibility shared by the whole of the organization.
  - A responsibility that cuts across the entire Institute.
  - Designing the website in an accessible way is just the starting point.
  - Developing the website is just a part of the process of having an accessible website.
  - Accessible documents and inclusive language maintain it and give it sustainability.
- Accessibility is a continuing process, not a passing fashion, neither a moment.
  - Accessibility and inclusion are part of our organizational culture and of the public value that IFT creates.
  - We shall create and update the technical competences of our personnel in order to maintain the process.

# Conclusions

- Accessibility and inclusion in ICTs are not an issue of software, but of people, of talent management
  - We have to build the new competences the digital world calls for.

INSTITUTO FEDERAL DE  
TELECOMUNICACIONES
